

integer cannot be negative

units can only be added after literal

gas limit to 3,000 and the gas price to

is lower than the current average and we're specifying 2 gwei because we're not in a hurry to have our transaction

up at which point

not

your transaction can process

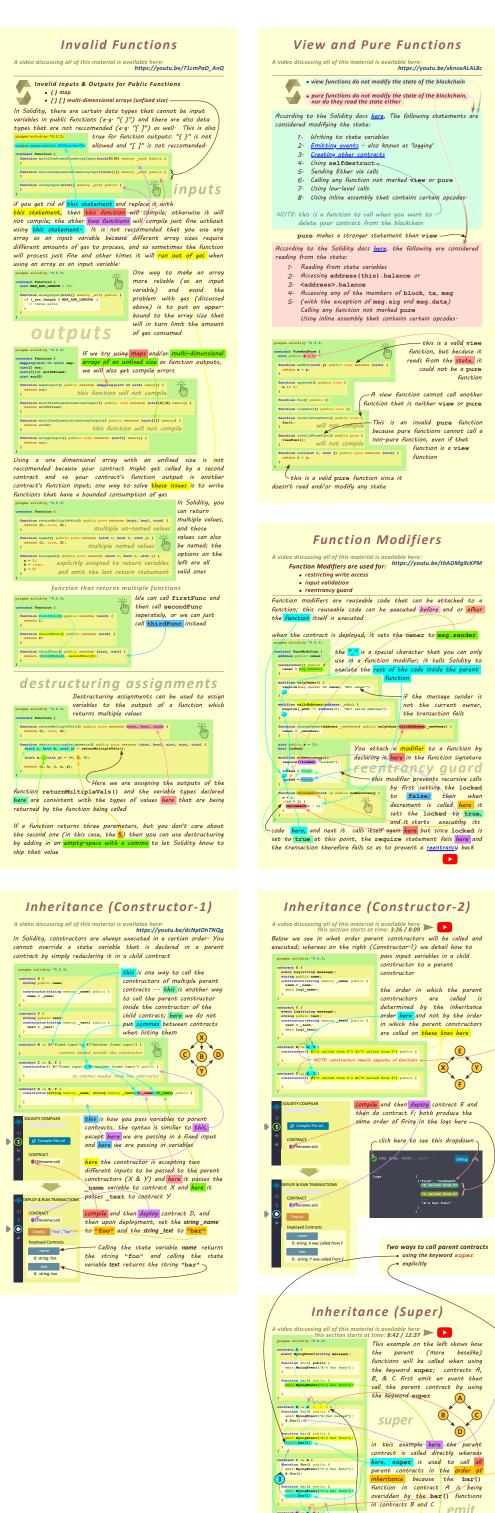

— The lower you set the gas limit the less comp

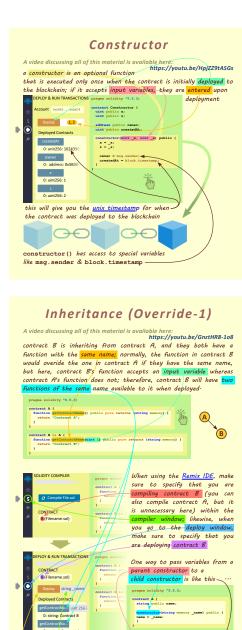

set, the more Ether you

will have to spend, bu your transaction will be processed faster

After your transaction is sent, and included in a block, your account will

be refunded for any unspent gas

variables is like this—

··the later case is

used when you want to

tract D is A, C {

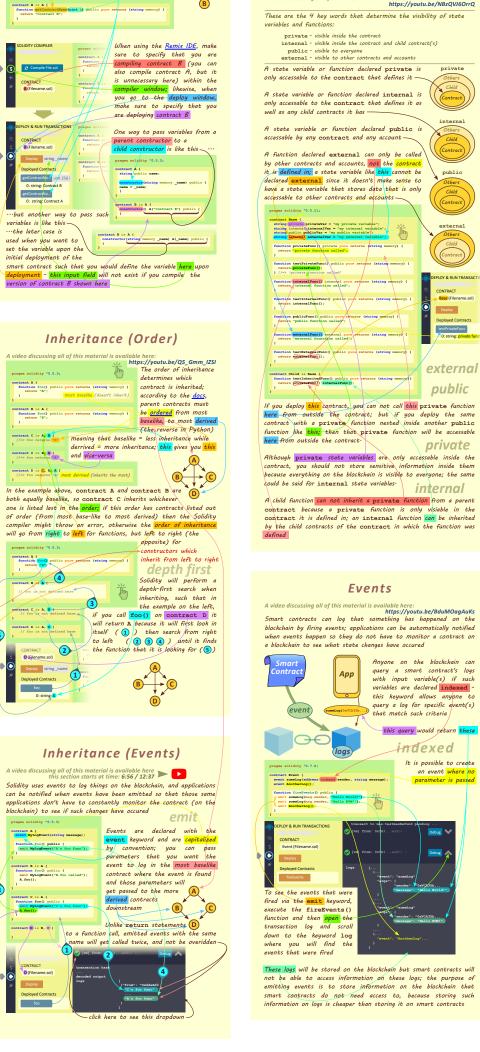

Deploy string name 1 onto Deployed Contracts
foo
0: string: A

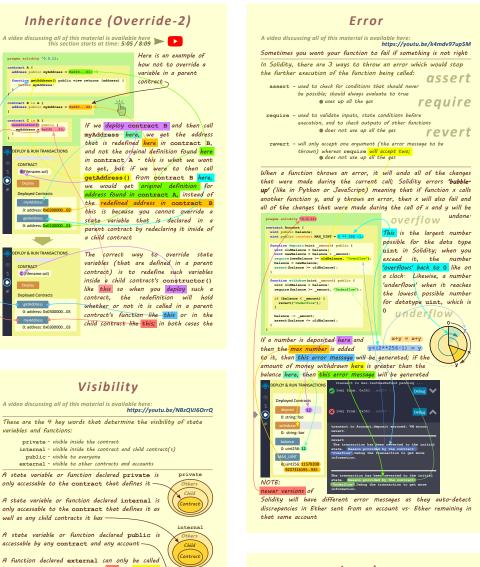

Inheritance (Events)

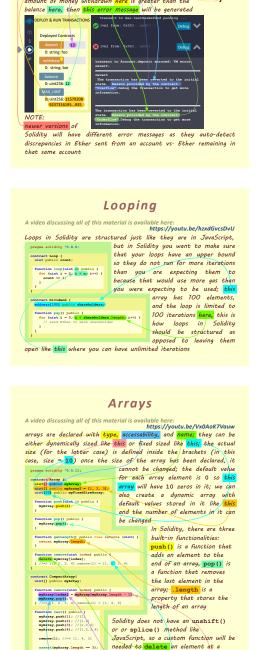

blockchain) to see if such changes have occured

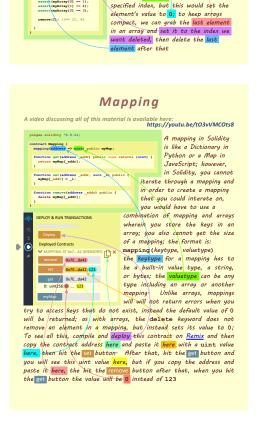

here, X, Y, & Z are hypothetical

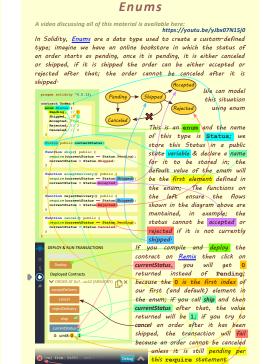

Inheritance (Order)
